The Free Flash Player 10 (for Windows and Linux users) will not perform, or some pages may not display correctly. Flash Player 10 is a free download available at for Linux and Windows users. The Full HTML Player plugin is a convenient way to show Flash videos on your site. The plugin will also adapt to various viewport settings so that you can play your video on your site with an optimal experience. To install the plugin, simply go to the template's install directory and copy the installation file, which is usually a.zip file. Be sure that you copy the installation file into the install directory of your template. The Progressbar plugin lets you display a progress bar in your contact form. To use it, simply include the standard "error_msg" syntax: It's really easy to install this module: just extract it and replace the standard messages with your own messages. WPBrowser is an lightweight and intuitive alternative to the popular Firefox browser that you'll find handy for surfers who want to view websites properly. With WPBrowser you can have multiple browser windows open, without having to first close or switch to another browser. It also lets you block specific websites and pages, using a block page panel, as well as what you're currently viewing. Another new feature is the ability to link to an online video from your website. Just add the following code into a post or page: In some forums, a user may have to post a message, but first add some small amount of irrelevant text. The SE version of the plugin lets you do this without slowing down your post. Place the text before the thread title. The text itself is replaced with a link which will take the reader to another tab. There are various options for controlling the message's visibility. For example, you can allow other users to post messages as soon as they've been viewed and approved by another user, or block messages from other users and allow only messages from moderators to be visible. You can also prevent your messages from being visible. Each forum is totally customizable, so you can add your own features to it. For example, you can include a special forum category, and create a button which will allow other users to add a new post to the forum automatically. Also, the new standard template system

Wallpapers manager, wallpapers, wallpaper changer, wallpaper for multiple displays. (All images are wallpaper free, available in various resolutions and formats, to be used on Windows or Mac OS X, Linux. This is version 0.0.6: Wandigo doesn't require much - only QT 4.5.1 or greater. It is still under development and there may be some bugs. Changes and Fixes since v0.0.6: Added "Thumbnail" mode, for when you want to see the wallpaper without the image. Fixed almost all bugs! Also added some initial support for multi-gpu Faster threading algorithm (threads are no longer delayed) Added ability to configure the rotation interval Added the ability to set a different wallpaper for each monitor Added the ability to enable or disable the ability to shuffle images Added the ability to specify how the wallpaper should be resized Added simple tooltip to the window to guide you through some of the more confusing options How to use it: Installing Wandigo is very simple, it is Windows only, and all steps are plain and simple. We recommend that you install it through Windows installer for ease of use. The other method is using the Wandigo GUI, where the wizard will walk you through the basic options as you select your parameters. The idea is to let the user get up and running with Wandigo quickly - not necessarily right away, but fast enough that the user is not stuck in a loop trying to tweak settings to make it work. The user may be presented with the configuration screens: Several different display settings are available to the user; Each setting gives the user control over a specific aspect of the wallpaper utility. ListView is a list of wallpapers, with the ability to sort them by file extension or by name. Thumbnails view shows the selected wallpaper in a thumbnailed form. Tile View shows the selected wallpaper in tiled mode, with the ability to navigate through the wallpapers by tile number. FullView shows the selected wallpaper in a "full window" view. Shuffle only reorders the list without changing any other setting. Stretching only defines how much of the wallpaper will be stretched horizontally or vertically. Center only centers the wallpaper

in the window horizontally or vertically.
